

Join our USAF Software Development Immersive Program

Want to learn something new and bring value back to your unit? Interested in being able to create a fully-functional app on a government network? Ready to help keep our country safe by working on the cutting edge of technology?

Join us for an intensive **12-week software development program** that will prepare you with critical skills in software engineering. Software touches everything in the military, and this program will teach you the skills needed to master software engineering and build real working programs. We are looking for people who enjoy problem-solving and want to take their technical skills to the next level.

Although no previous experience is required, our entrance assessment will require some basic programming skills. If you need to get up to speed, we strongly suggest you take our **prep work**, which will prepare you with basic programming skills needed to pass our assessment and be accepted to the program. Alternatively, if you are already proficient in Javascript, you are welcome to take the assessment without doing prep work.

Details:

- Full-time courses starting **October 19th and November 9th**
- 12-weeks; Monday-Friday schedule **delivered entirely online**
- **October 1st and 16th** application deadlines (link below)
- **Commander approval required**; resources are provided in the application
